

# BDSL Business Internet Access

Full business access for SMEs

T-Systems

The BDSL service includes everything an enterprise can need in connection with Internet. A complete solution for business Internet operation serving several users. Its bandwidth can reach 1 Mbps which is the fastest asymmetrical Internet access currently available on the market. With the BDSL you can operate your website and mail system in a professional way without server and professional skills. The kit includes a website wizard service with which you can create your own website within a short time.

---

## Who can benefit from the T-Systems BDSL service?

- SMEs that want to construct high-speed data network between their sites and need a connection between the server and the site due to integrated company management software.
- Those for whom high data transmission rate is the major requirement.
- Companies whose profile is content service or that employ teleworkers.

## Benefits gained with the use of the service

- Cost-efficient data transmission.
- Foreseeable costs due to flat-rate monthly fee.
- Voice and fax communication can be carried on the telephone line simultaneously with Internet access.
- Can be installed also on existing analog and ISDN lines.
- Very fast data transmission. Maximum download rate – depending on technical conditions– is 18 Mbps, maximum upload rate is 1 Mbps.
- High data security, more reliable than conventional technologies.
- The Internet connection is set up within a few seconds so users can almost immediately start surfing.
- The service enables teleworking, web presence with web and mail space and supports website creation with a website wizard.

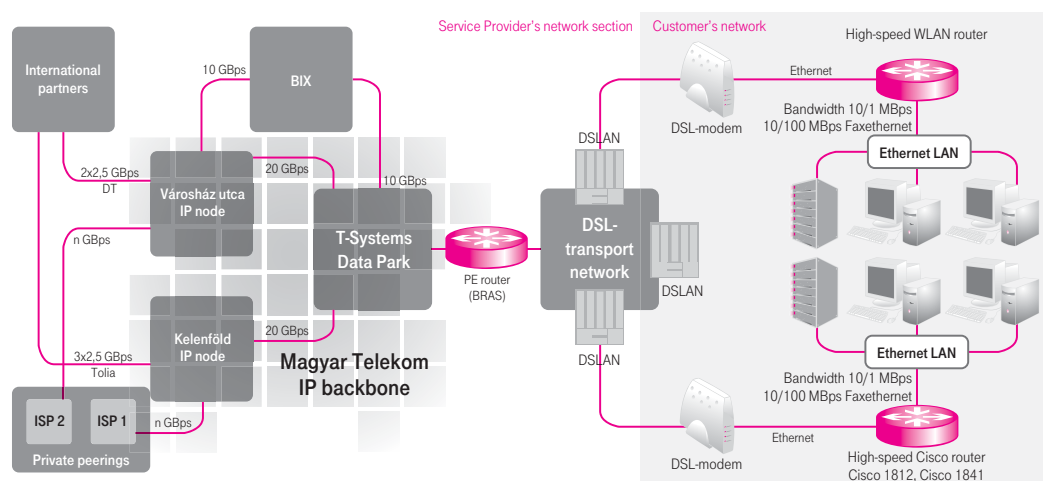

## Service parameters

BDSL is based on ADSL technology (asymmetrical digital subscriber line). It is a solution that upgrades traditional analog or ISDN telephone lines to high bandwidth digital lines enabling high-speed Internet access, without disturbing telephone traffic. The telephone traffic and digital data transmission are separated by splitters installed in the telephone exchange and at the subscriber's premises.

### Service elements:

- Internet connection unlimited in terms of time and data traffic,
- PPP over Ethernet router to which 4 computers – or local networks with the help of Ethernet hub or switch – can be directly connected,
- domain registration (one .hu, .eu or international),
- optional fixed or dynamic IP address,
- reserve telephone connection,
- honlapcsomag, amelynek tartalma:
  - Linux or Windows 2000 system environment (as requested),
  - 60 e-mail boxes (POP3, SMTP, IMAP; detailed parametering with 120 GB space),
  - 500 MB webspace,
  - individual online web design system,
  - web statistics, FTP upload, CGI-BIN directory,
  - Frontpage extension, PHP support depending on the selected platform,
  - primary and secondary name server service (DNS1, 2),
- database usage (MySQL or MSSQL),
- secure SSL encryption,
- webspace that can be merged with several domain names.

## Functioning of the service
