

# Managed Security

Full protection of business data and applications

T-Systems

Today almost all enterprises are connected to a network via the Internet. T-Systems Managed Security service offers a satisfying solution for its protection and for complex critical IT security issues. T-Systems Managed Security service offers protection of the IT infrastructure through local or centralized monitoring, construction and operation of a protection system.

---

## Who can benefit from the T-Systems Managed Security Service?

- Enterprises already having a data protection system where continuous maintenance is not guaranteed or the system is not managed.
- Enterprises with one or more sites interconnected with each other and/or the Internet where local security rules are in place and that wish to have regular full security monitoring covering all elements of the infrastructure.
- Enterprises not having a data security solution.

## Benefits gained with the use of the service

- Continuous undisturbed data communication, the service guarantees protection of business critical applications, data and transactions.
- As a result of the monthly flat-rate charge, costs are transparent and foreseeable, there is no need for major investment.
- T-Systems offers one-stop service: full support to all data communication and security issues at a single point.
- T-Systems possesses a nationwide network so its professionals are actively involved in the security system of the operating infrastructure both at the sites and on a remote access basis via protected network connections.
- T-Systems assumes full responsibility for the operation and management of the security system while strategic decisions are taken by the managers in charge of the given field, management remains in your own hands.

## Service package elements

The service includes design, construction, operation regular maintenance, fault repair within and beyond warranty period, continuous support to the local and centralized monitoring function.

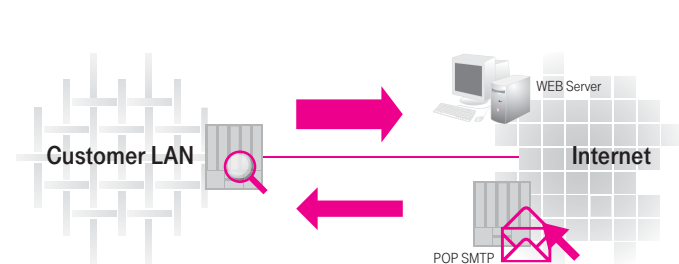

The central service offers 5 x 8 hours or continuous 7 x 24 hours monitoring. An optional service feature is monitoring the activities of system users, logging of deviations and generation of alarms that ensures continuous monitoring of access rights and prevention of malicious intrusion attempts.

Security engineering support is provided upon request: a dedicated professional with knowledge of the constructed and monitored system monitors the operation and helps our partner with consulting and design proposals for any technical application issue concerning security. Continuous automatic updating of the devices and software of the operated security solution is ensured through software license services.

## Examples of application of the service

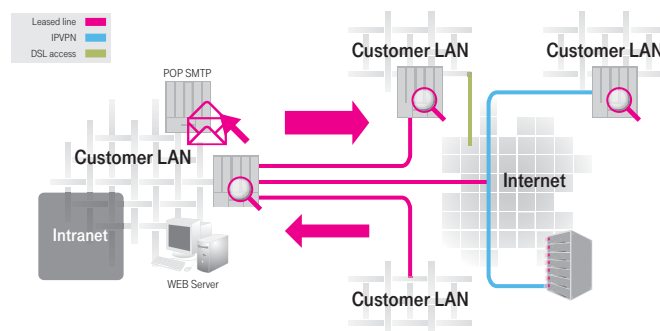

### Single site configuration

- Basic firewall functions: enabling/disabling ports, IP addresses and domains.
- Enhanced firewall: IPS functions, content filtering.
- Anti-X functions: anti-virus, anti-spy.

### Multi-site configuration

- Basic firewall functions: enabling/disabling ports, IP addresses and domains.
- Enhanced firewall: IPS functions, content filtering, DoS and DDoS filtering, elimination of protocol anomalies.
- Anti-X functions: anti-virus, anti-spy, anti-spam, anti-spyware.
- Other IT security solutions: VPN solutions, bandwidth management.
- Client side protection, rights management, network segmentation.
