

## PATIENTMOBILE / PATIENTPORTAL

### QUICK AND SAFE ACCESS TO PERSONAL MEDICAL RECORDS

As smartphones are getting essential for everyday life there is an obvious demand for handling everyday processes via these modern tools. Parking, shopping, orientating can be easily handled by smartphones – why not manage own medical data in such way? PatientMobile / PatientPortal is a perfect tool to help patients manage (view, transfer or share) their medical data in a completely secure way.

Patients can use this service as a keyhole in order to have a look into the hospital's system. Through this solution patients can see their medical records and easily check, book or cancel appointments and they can even get reminders to these if they wish so. It is an independent web-based solution that requires no specific hardware or software and can be reached from any device (via PC, notebook, tablet, smartphone, etc.) and it is ready to operate from cloud as well.

#### KEY FEATURES

- document and appointment management;
- medicine finder
- web-based solution
- direct connection between portal and HIS
- authorized users can access patients' data (e.g. family members)
- supports notifications

#### BENEFITS

- ensures healthcare data accessibility anytime, anywhere
- platform neutral
- satisfies the strong demand for a second opinion
- environment friendly
- cost & time efficient (less paper and administrative work)
- user friendly, simplified interface
