

## E-MEDSOLUTION

# INTEGRATED, WEB-BASED HOSPITAL INFORMATION SYSTEM

**e-MedSolution** is an extremely reliable and advanced web-based hospital information system (HIS) based on modern technological standard. It is building on T-Systems' long-tested, safe and robust integrated HIS that has been in use for almost two decades and found effective in Hungary and in abroad, currently serving more than 30.000 HIS users in eight countries. e-MedSolution is a flexible solution for all kinds of healthcare institutions such as small practices, medical universities or hospital chains.

The system is highly integrable as it is capable of establishing and maintaining an integral link and cooperation – owing to the latest standard communication channels such as HL7, DICOM, etc. – with all the other important and modern IT solutions, such as business and controlling systems (e.g. SAP), laboratory systems (e.g. GLIMS), diagnostic imaging procedures (e.g. IMPAX, eRAD PACS), patient logistics or clinical decision support solutions. The solution can not only fully satisfy all basic IT needs of any healthcare institution ranging from patient admission through treatment protocols to itemised invoicing but it also allows the application of special services which can optimise the quality of treatment and the economic operation of the healthcare institution.

### KEY FEATURES

- integrated solution for any healthcare institutions
- web-based technology
- centralized user administration
- modular system
- supports the latest wireless, mobile communication technologies
- validity, integrity and privacy of all stored data
- can simultaneously support several languages

### BENEFITS

- easily integrable
- largely scalable both in end user number and in functionality
- flexible system
- high availability, stable and reliable (24/7) support
- localized versions for CEE markets
- fully customizable layout
